AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A method for synthesis of polypeptides or polynucleotides in vitro in vitro transcription of mRNA and/or translation of polypeptides, the method comprising:

synthesizing polypeptides <u>said mRNA and/or polynucleotides polypeptides</u> in a <u>transcription and/or translation reaction mix substantially free of polyethylene glycol, comprising:</u>

an extract from bacterial cells <u>comprising membrane vesicles containing respiratory</u> chain components; components of polypeptide and/or mRNA synthesis machinery; a template for transcription of said mRNA and/or translation of said polypeptide; monomers for synthesis of said mRNA and/or polypeptides; and co-factors, enzymes and other reagents necessary for said transcription and/or translation;

magnesium at a concentration of from about 5 mM to about 20 mM;

the absence of an exogenous high energy phosphate source;

wherein oxidative phosphorylation, which is sensitive to electron transport chain inhibitors, is activated in said reaction mix.

2-3. (canceled)

- 4. (currently amended) The method of Claim 1, wherein <u>transcription of mRNA and/or translation of polypeptides</u> synthesis of said polypeptides or polynucleotides is at least two fold higher than synthesis in the absence of said oxidative phosphorylation.
- 5. (currently amended) The method according to Claim 1, wherein <u>transcription of mRNA and/or translation of polypeptides</u> synthesis of said polypeptides or polynucleotides is at least three fold higher than synthesis in the absence of said oxidative phosphorylation.
- 6. (currently amended) The method of Claim 1 wherein said <u>transcription of mRNA</u> <u>and/or translation of polypeptides</u> <u>synthesis of polypeptides or polynucleotides</u> is performed as a batch reaction.

USSN: 10/643,683

7. (currently amended) The method of Claim 1, wherein said <u>transcription of mRNA</u> <u>and/or translation of polypeptides</u> <u>synthesis of polypeptides or polynucleotides</u> is performed as a continuous reaction.

8-12. (canceled)

13. (currently amended) A method for synthesis of polypeptides or polynucleotides in vitro in vitro transcription of mRNA and/or translation of polypeptides, the method comprising:

synthesizing said polypeptides said mRNA and/or polynucleotides polypeptides in a transcription and/or translation reaction mix substantially free of polyethylene glycol, comprising:

an extract from bacterial cells comprising components of polypeptide synthesis machinery, wherein such components are capable of expressing a nucleic acid encoding a desired polypeptide grown in glucose and phosphate containing medium comprising components of polypeptide and/or mRNA synthesis machinery; a template for transcription of said mRNA and/or translation of said polypeptide; monomers for synthesis of said mRNA and/or polypeptides; and co-factors, enzymes and other reagents necessary for said transcription and/or translation;

magnesium at a concentration of from about 5 mM to about 20 mM;

the absence of an exogenous high energy phosphate source;

at least one of spermine or spermidine at a concentration of at least about 1 mM;

wherein oxidative phosphorylation, which is sensitive to electron transport chain inhibitors, is activated in said reaction mix.

14- 22 (canceled)

- 23. (previously presented) The method of Claim 13 wherein said synthesis is performed as a batch reaction.
- 24. (previously presented) The method of Claim 13, wherein said synthesis of polypeptides is performed as a continuous reaction.

USSN: 10/643,683

25. (currently amended) The method of Claim 13, Claim 1, wherein said bacterial cells are E. coli are grown in glucose and phosphate containing medium.

26-29. (canceled)
